

Rinker Materials Arch

Rinker Arch

The Rinker Arch and Rinker Arch "O" Series delivers a strong and aesthetically pleasing solution for various applications. These versatile systems can be used with precast or cast in place footings.

The arch sections are quick and easy to install, units can be assembled quickly to reduce costs, or ecological damage when installed in environmentally sensitive areas.

Benefits

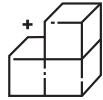

- Arch is designed according to the Canadian Highway Design Code and the CSA S6 standards
- The arch spans are built for quick and easy installation for diverse installations
- Arch spans are low impact on the environment and often used in environmentally sensitive areas
- Units can be assembled quickly to reduce costs associated with road closures

**EASY TO
INSTALL**

**ENGINEERED MODULAR FOR
LOADING SYSTEM**

Applications

- Highway bridges and culverts
- Material storage or utility storage structures
- Pedestrian crossings
- Replacement of channels or ditches to allow land to be used productively above
- Open bottom environmental sensitive areas

Specifications

- CHBDC - CSA S6
