

# Trenchless Technologies

Trenchless technologies are used to install underground infrastructure by various methods such as micro-tunneling and jacking of pipe that allow for minimal disruption to traffic, the public and the environment. Trenchless methods often take a fraction of the time to install.

## Micro-Tunneling

Micro-tunneling is a trenchless installation method used to install pipelines below the surface by use of a boring machine that is operated by a control panel.

## Jacking Pipe

Micro-tunneling is a trenchless installation method used to install pipelines below the surface by use of a boring machine that is operated by a control panel.

## Applications

- Casing for primary line
- Combined sewer overflows
- Conduct for electrical and communication utilities
- Microtunnel pipe-primary liner
- Sewage systems
- Sewer outfalls
- Stormwater and sanitary sewer

**EASY TO  
INSTALL**

**SUSTAINABLE  
PRODUCT**

**MADE TO  
OPSD**

## Specifications

- CSA A 257.2M
